

Competitor Formulation Intelligence

Hair Restoration & Sexual Wellness

Retail pricing, supply cadence, formulation structure, and strategic differentiation

Scope and pricing note. This report summarizes publicly displayed U.S. competitor offerings. Pricing can vary by promotion, prescribed strength, subscription term, location, and eligibility. Monthly-equivalent pricing is labeled separately from actual shipment size. As-needed sexual wellness products are reported by dose count because a fixed number of calendar days is not clinically meaningful.

Executive Summary

- Hair restoration competitors are moving beyond simple finasteride + minoxidil combinations toward multi-mechanism topicals that add retinoids, antihistamine/anti-inflammatory agents, melatonin, caffeine, prostaglandin analogs, exosomes, or specialized delivery vehicles.
- The most formulation-dense hair products identified are Happy Head SuperSolution ProBlend, Musely Classic/Modern used together, and Maximus All-in-One Gel. XYON differentiates less by ingredient count and more by its controlled-release SiloxysSystem gel.
- Sexual wellness competitors are increasingly combining vascular agents with central arousal, intimacy, hormone, or ejaculation-control pathways. BlueChew GOLD and Strut SuperStrut are the clearest examples of multi-pathway ED products.
- Pricing architecture is part of the differentiation. Hair competitors commonly lock in 90-day supplies while advertising a monthly equivalent. Sexual wellness competitors often price by tablet or number of as-needed doses per 30-day period.
- Strategically, the strongest white space is phenotype-based product design: DHT-dominant hair loss vs inflammatory/scalp dysfunction vs regenerative support; and vascular ED vs low arousal/libido vs ED + PE vs low-T-associated sexual dysfunction.

1. Hair Restoration Competitor Summary

Company / Product	Public Formula	Retail Price	Supply / Billing	Differentiator
Happy Head SuperSolution ProBlend	Minoxidil 8% + cetirizine 1% + latanoprost 0.005% + dutasteride 0.25% + finasteride 0.25% + melatonin 0.1% + caffeine 0.2% + tretinoin 0.001% + vitamin D3 1,000 IU/mL + biotin 0.2%	\$79 subscription / \$99 one-time. First order promo displayed at \$49.	30 mL used at 1 mL/day = ~30 days. Billed monthly.	10-in-1 formula; dual 5AR inhibition plus growth, inflammatory, prostaglandin, antioxidant and scalp-support pathways.
Musely Hair Topical Classic	Minoxidil 8% + dutasteride 0.3% + spironolactone 0.075% + tretinoin 0.01% + ketoconazole 2% + hydrocortisone 1%	\$99 auto-refill / \$141 one-time for 3 months.	90-day supply. Auto-refill equivalent ≈ \$33/month.	Combines DHT suppression, minoxidil, topical antiandrogen, retinoid, antifungal and anti-inflammatory components.
Musely Hair Topical Modern	Melatonin 0.1% + caffeine 0.5% + latanoprost 0.004% + cetirizine 1% + 250 million exosomes	\$109 auto-refill / \$154 one-time for 3 months.	90-day supply. Auto-refill equivalent ≈ \$36.33/month.	Nontraditional regenerative/scalp formula. Can be paired with Classic; Musely markets the two-product bundle at \$69/month starting with a 3-month supply.
Maximus All-in-One Gel	Dutasteride 0.1% + minoxidil 5% + tretinoin 0.01% + fexofenadine 0.1% + melatonin 0.0033% + caffeine 0.2%	\$64.99/month advertised.	Available as a 90-day supply.	Unusual use of fexofenadine plus melatonin/caffeine layered onto a conventional dutasteride/minoxidil/tretinoin core.
XYON Topical Dutasteride	Dutasteride 2% in proprietary SiloxysSystem controlled-release gel	\$139 subscription / \$149 one-time. One-time first order also lists a \$20 consultation fee.	30-day supply on displayed plan; subscription every 30 days.	Differentiates primarily through a patented controlled-release vehicle intended to retain drug in scalp tissue.
Ro Mane Spray	Minoxidil 6% + finasteride 0.3% + tretinoin 0.025%	\$50/month on quarterly plan; \$43/month on 6-month plan.	Hair treatments ship quarterly. Quarterly plan = 90-day supply; 6-month plan = 180 days.	Simple, high-clarity 3-in-1 formulation with tretinoin specifically positioned to enhance minoxidil absorption.
Keeps Minoxidil+ Spray	Minoxidil 5% + melatonin 0.1% + tretinoin 0.01% + caffeine 0.2%	\$135 per bottle (standard quarterly shipment); promotional first-order pricing may differ.	1 bottle = 3-month / ~90-day supply. Equivalent \$45/month before promos.	Useful non-5AR option for patients seeking multi-ingredient topical growth support without finasteride/dutasteride.

5AR = 5-alpha-reductase. Pricing excludes taxes unless the company states otherwise. “Equivalent monthly” figures are arithmetic normalization of publicly stated multi-month prices, not separate checkout offers.

Hair Market Takeaways

- Formula density is becoming a marketing feature. Happy Head and Musely visibly compete on the number and breadth of ingredients, not just the dose of minoxidil or finasteride.
- A second differentiation axis is delivery technology. XYON illustrates that a company can create premium positioning around the vehicle and tissue-targeting narrative even with a single active ingredient.
- Anti-inflammatory / antihistamine strategies are appearing repeatedly: cetirizine, fexofenadine, ketoconazole, hydrocortisone, and spironolactone are all being incorporated by competitors.
- Regenerative and prostaglandin-adjacent positioning is emerging through exosomes and latanoprost. These are among the more distinctive ingredients and merit a separate evidence, safety, and compounding-feasibility review before any product-design decisions.

2. Sexual Wellness Competitor Summary

Company / Product	Public Formula	Retail Price	Supply / Billing	Differentiator
BlueChew GOLD	Base: sildenafil 70 mg + tadalafil 18 mg + apomorphine 2 mg + oxytocin 160 IU. Higher strengths increase all or most components.	Advertised from \$7.30/tablet; actual per-tablet cost varies by pack size, strength, and billing term.	As-needed. Publicly described monthly packs: 6, 10, or 18 tablets; quarterly option: 18 tablets / 90 days.	Four-pathway positioning: rapid + long PDE5 coverage, dopaminergic arousal, and oxytocin/intimacy signaling.
Strut SuperStrut	Tadalafil + vardenafil + oxytocin + apomorphine (site also references an apomorphine OR PT-141 formulation). Low strength shown: tadalafil 15 mg + vardenafil 5 mg + apomorphine 2 mg + oxytocin 100 IU.	Starts at \$79/month for 10 tablets; displayed strength tiers include \$79, \$89, and \$99.	10 dissolvable tablets per 30-day auto-refill.	Similar brain + body architecture to BlueChew, but uses vardenafil + tadalafil and offers tiered strengths.
Ro Sparks	Sildenafil 55 mg + tadalafil 22 mg	\$12 per dose. Monthly plans range from \$48 (4 doses) to \$168 (14 doses).	4-14 as-needed doses per 30-day monthly plan; quarterly plans also available.	Clean dual-PDE5 proposition: fast-onset sublingual delivery plus long tadalafil window.
Maximus Blood Flow Protocol	Current combo options include tadalafil + vardenafil. Daily bottles list 30 doses; examples: 2.5 mg + 2.5 mg or 5 mg + 5 mg.	2.5/2.5 mg: \$99.99/month. 5/5 mg: \$149.99/month. 10/10 mg as-needed: 4 doses \$59.99; 8 \$109.99; 12 \$159.99.	Daily versions: 30 doses / 30 days. High-dose version is priced by as-needed dose count.	Positions PDE5 therapy as whole-body “blood flow” / performance support rather than ED-only treatment.
Strut Mojo	Enclomiphene with optional tadalafil	\$79-\$119/month depending on prescribed dose.	30-day supply.	Combines hormone optimization / fertility-preserving testosterone support with erectile-function treatment.
Hims Sex Rx + Climax Control	Tadalafil + fluoxetine	Starts at \$39/month, paid upfront according to plan.	Monthly treatment plan; exact dose strength and tablet count are personalized and not displayed before intake.	Targets ED + premature ejaculation in one daily-style regimen rather than escalating PDE5 dose alone.
Hims Testosterone Rx+	Enclomiphene + tadalafil + supplement blend	Starts at \$99/month on a 10-month plan paid upfront.	10-month plan; monthly-equivalent price shown. Shipping cadence / exact pill count varies by prescribed plan.	Broadens sexual wellness into low-testosterone symptoms while preserving a direct ED component through tadalafil.

For as-needed ED products, “days of supply” is not fixed. This report therefore shows doses per 30- or 90-day subscription period. Compounded products are not FDA-approved as finished combinations; individual active ingredients may have FDA-approved indications that differ from the compounded use.

Sexual Wellness Market Takeaways

- Dual PDE5 products are now common enough to be a category: sildenafil + tadalafil and tadalafil + vardenafil are being sold as speed + duration combinations.
- The more differentiated products add a central pathway rather than simply more vasodilation. Apomorphine and, in some Strut materials, PT-141 are used to create an arousal/desire narrative alongside erectile hemodynamics.
- Competitors are increasingly bundling sexual function with adjacent phenotypes: premature ejaculation (fluoxetine), low testosterone / fertility preservation (enclomiphene), and broader performance or vascular positioning.
- This suggests a product ladder can be built around the patient phenotype rather than “stronger ED medication”: vascular-only, vascular + arousal, ED + PE, ED + low T, and advanced refractory-ED pathways.

3. Strategic White-Space Opportunities

Important. The opportunities below are market-design hypotheses, not recommendations to prescribe or compound specific combinations. Each concept should go through evidence review, interaction/safety assessment, pharmacy feasibility, state-law review, and medical governance before commercialization.

Hair Restoration

Segment	Patient phenotype	Competitive pattern	Opportunity
Core AGA	DHT dominant / early AGA	Simple topical finasteride or dutasteride + minoxidil	Compete on tolerability, vehicle, adherence and price rather than excessive ingredient count.
Scalp + Growth	AGA with seborrhea / scalp inflammation	DHT + minoxidil + carefully selected scalp/ anti-inflammatory support	Competitors show demand for a “scalp environment” story. Opportunity is a cleaner, evidence-ranked version rather than a kitchen-sink blend.
Non-5AR Growth	Patients avoiding finasteride/dutasteride	Minoxidil-centric formula + enhancer/support pathway	Keeps demonstrates a commercial niche for multi-active, non-5AR topicals.
Advanced / Regenerative	Refractory thinning or premium tier	Separate adjunct serum rather than embedding every ingredient in one bottle	Musely’s Classic + Modern architecture is strategically strong because it separates conventional pharmacology from regenerative positioning.
Delivery-Led Premium	Patients worried about systemic exposure	Fewer actives + differentiated vehicle	XYON shows that delivery IP can support a premium brand without maximal ingredient count.

Sexual Wellness

Tier	Patient phenotype	Competitive pattern	Strategic implication
Foundation	Predominantly vascular ED	Single PDE5 or low-dose daily option	Low complexity, low price, easy entry tier.
Fast + Long	Need speed + extended readiness	Two PDE5 inhibitors / sublingual delivery	Already crowded; differentiation would need better dosing logic, tolerability, or delivery.
Arousal + Erection	Low desire/arousal plus erection difficulty	PDE5 + central arousal pathway	One of the clearest innovation areas. Requires especially careful safety and evidence review.
ED + PE	Erection difficulty plus early ejaculation	PDE5 + SSRI	Hims is explicitly building phenotype-based cross-condition products here.
ED + Low T	Low libido / low T phenotype	PDE5 + enclomiphene / hormone program	Strut and Hims demonstrate a converging market around sexual function + endogenous testosterone support.
Refractory ED	Inadequate response to oral PDE5s	Escalate by mechanism, not merely dose	Potential future path includes clinician-guided non-oral / locally acting therapies rather than increasingly high oral PDE5 stacking.

4. Pricing Benchmark Snapshot

Category	Observed public range	Examples
Hair topical - mainstream combination	~\$33-\$65/month equivalent	Musely Classic (\$33 eq.), Keeps Minoxidil+ (\$45 eq.), Ro Mane (\$43-\$50), Maximus (\$64.99)
Hair topical - premium / highly differentiated	~\$79-\$149 per 30-day order	Happy Head ProBlend (\$79 subscription), XYON topical dutasteride (\$139 subscription / \$149 one-time)
Sexual wellness - as-needed combination	~\$5.63-\$12+ per dose at scale	BlueChew MAX/VMAX ~\$5.63; GOLD from \$7.30; Ro Sparks \$12
Sexual wellness - 4-pathway premium	~\$79-\$99 per 10-dose month or higher depending plan	Strut SuperStrut \$79-\$99 for 10 tablets; BlueChew GOLD varies materially by quantity
Hormone + sexual function	~\$79-\$119+ per month	Strut Mojo \$79-\$119; Hims Testosterone Rx+ starts \$99/month with long prepay term

Research & Clinical Use Note

This document is a competitor-intelligence summary, not a clinical protocol. Descriptions of mechanisms and benefits reflect publicly marketed product positioning and known ingredient classes; they should not be interpreted as validation that each combination is superior, evidence-based, FDA-approved as a compounded formulation, or appropriate for any individual patient. Any proposed product should undergo independent literature review, pharmacy and stability assessment, interaction screening, medical governance, legal/regulatory review, and prescribing safeguards.
